Sr. No.	Title of the Experiment
1	To measure and calculate currents and voltages for a given resistive circuit and verify KCL and KVL.
2	To verify superposition theorem experimentally for a given resistive circuit consisting of two independent sources.
3	To verify Thevenin's theorem experimentally for a given circuit.
4	To verify maximum power transfer theorem experimentally for a given circuit.
5	To verify reciprocity theorem experimentally for a given circuit.
6	To measure and calculate RC time constant for a given RC circuit.
7	To measure and calculate RC time constant for a given RL circuit.
8	To measure and analyze (settling time, overshoot, undershoot, etc.) step response of for a given series RLC circuit for following cases: (1) $\zeta = 1$ (critically damped system), (2) $\zeta > 1$ (over damped system), (3) $\zeta < 1$ (under damped system). Choose appropriate values of R, L, and C to obtain each of above cases one at a time.
9	To measure and calculate Z-parameters for a given two-port system.
10	To measure and calculate Y-parameters for a given two-port system.
11	To measure and calculate h-parameters for a given two-port system.
12	To measure and calculate ABCD-parameters for a given two-port system.

**Design based Problems (DP)/Open Ended Problem:**

1. Write a 'c' program to obtain RC time constant from a given step response of RC circuit.
2. Write a 'c' program to plot frequency response of RC circuit for different values of R and C.
3. Write a 'c' program to obtain 3-dB bandwidth and RC time constant from a given frequency response of RC circuit.
4. Write a 'c' program to plot impedance of a given series RLC circuit as a function of frequency. Also obtain minimum value of impedance and series resonance frequency using 'c' program.
5. Write a 'c' program to obtain following parameters from step response of series RLC circuit for different values of R, L and C.
  - a. Propagation delay
  - b. Overshoot
  - c. Undershoot
  - d. Damping factor
  - e. Natural frequency
  - f. Settling time

<p>Mini project is an opportunity to make a difference in the experience of education in its own way. It is an attempt of scientific study of the problem in surrounding in order to guide, correct and evaluate the actions and decisions about it. It is based on a small project correlating scientific knowledge and day to day experience which encourages development of scientific attitude to solve real life problems among students.</p> <p><b>The Objectives of Action Research are:</b></p> <ul style="list-style-type: none"><li>✓ To make students sensitive towards societal issues</li><li>✓ To learn scientific principles from day-to-day experiences</li><li>✓ To develop psycho-technological skills through observation, classification, statement of hypothesis etc.</li><li>✓ Development of communication, organizational skills and maturity through discussion, presentation etc.</li><li>✓ To develop ability to correlate science, technology and society</li><li>✓ To apply engineering knowledge and propose innovative, sustainable solutions to the real-life challenges</li></ul> <p><b>Steps for Implementation: (ISE: Through 2 Phases of Evaluation) and ESE</b></p> <ul style="list-style-type: none"><li>✓ Keen observation of the surrounding/society</li><li>✓ Identification of the problem</li><li>✓ Analysis of the problem</li><li>✓ Collection of relevant information by formulating research questions</li><li>✓ Suggesting plan of action</li><li>✓ Conducting experiments</li><li>✓ To draw conclusion</li><li>✓ To find the possible solution to rectify the problem</li><li>✓ To execute experiments and remedial measures wherever possible</li></ul> <p>Students can seek guidance from teachers, other experts and make effective use of other sources of information available around them. Students must ensure that problem to be solved in manageable in one semester.</p> <p><b>Teachers must follow the below mentioned principles:</b></p> <ul style="list-style-type: none"><li>✓ Make student confront problem solving</li><li>✓ Develop methods and techniques of handling problems.</li><li>✓ Teach how to use the methods and not directly give solution to the problem.</li></ul>

- ✓ Lead the students to the peak of their powers for improvement of better learning.

The H/W and S/W resources required to complete the Mini-Project-I may be beyond the scope of curriculum of courses taken or may be based on the courses but thrust should be on

- Learning additional skills
- Development of ability to define and design the problem and lead to its accomplishment with proper planning
- Learn the behavioral discipline by working in a team. The team may be maximum three (03) students.

**Evaluation:**

Project report should contain project title, student details, certificate and acknowledgements. Other sections of the report shall be decided by the department based on projects. But it must have introduction, necessity of project, objectives, hypothesis, plan, observations, and analysis of results, conclusion and references along with other sections related to technology. The ISE and ESE evaluation will be carried out based on the rubrics framed by the Department. The ESE marks will be based on final demonstration of the project and viva based on it and report/poster/technical paper of the project in the standard format provided by the Department.
